

PORT OF NEWPORT DOCK 5 PIER REPLACEMENT

The Port of Newport Dock 5 Pier Replacement required the complete demolition and reconstruction of the 60-year-old dilapidated wooden pier structure that is integral to the commercial fishing industry of Newport. Prior to construction, Advanced American Construction installed platform brackets on driven pipe piles to accommodate temporary access and utilities, allowing the fishing community 100% foot access to the dock complex during the duration of the project. In March of 2022, Advanced American Construction received 1st place in the Build America Awards Highway and Transportation Renovation category from the Associated General Contractors of America (AGC). The Build America Awards honor AGC members who build the nation's most impressive construction projects.
